

FLAMINGO

Fabrication of Lightweight Aluminium Metal matrix composites and validation In Green Vehicles

FLAMINGO is a H2020 project funded under the LC-GV-06-2020 topic, aiming to the development of high-performance lightweight Aluminum composite materials thanks to a novel metallurgical and forming combined approach for making automotive parts. The FLAMINGO Project aims to manufacture strengthened Aluminium Metal Matrix nano-Composites, Al-MMnC, with enhanced properties in terms of strength and stiffness, compared to the existed Al alloys used in Green Vehicles.
